1	<a href="#">Infection in Critical Care Quality Improvement Programme</a>	QI project/resource	The ICU surveillance programme aims to characterise and monitor all ICU and CVC (associated and related) blood stream infections across adult, neonatal and paediatric units in England, in order to identify concerns and support actions to reduce the infection rates. Data is collected and analysed on a quarterly basis and unit level reports are generated and sent to respective units.	England		Infection rates		Explore future opportunities for data linkage for improved infection reporting.

7	<a href="#">Safety Investigation Branch - Maternity Investigation</a>	project/ resourc e	intrapartum stillbirth, early neonatal deaths and severe brain injury diagnosed in the first seven days of life, when the baby:		
	<a href="#">s</a>		<ul style="list-style-type: none"> <li>* was diagnosed with grade III hypoxic ischaemic encephalopathy (HIE); or</li> <li>* was therapeutically cooled (active cooling only); or</li> <li>* had decreased central tone and was comatose and had seizures of any kind.</li> </ul> <p>Also investigate direct or indirect maternal deaths in the perinatal period.</p>		

4 6	<a href="#">NeonIN</a>	Research	Neonatal Infection Surveillance Network with 31 UK neonatal units included in membership. Collects and stores data about the organisms (bacterial and fungal) causing neonatal infections and their antibiotic/antifungal resistance patterns. It matches anonymised demographic and clinical data to the microbiology information. These data allow the monitoring of infections and clinical practice over time.	UK and international	Since 2014	Infection rates
