

Domain 1: delivering and developing a high-quality service

Healthcare organisations provide a high-quality service to our patients and the public. In the present, specifically in relation to:

measurable, effective clinical provision and developing a safe service with outcomes based on delivery of high technical and clinical standards of service that provide a good experience for patients. To gain a higher score, applicants will need to demonstrate how they have cascaded their practice more widely. For all those who have been successful in this domain, we will be interested in your experience

clinical practice includes international practice

Applicants should outline which activities relate to their clinical services where they are paid by the NHS, and to other aspects of their work as a consultant.

Applicants should include a identified manner - like outcome data - where they are able to demonstrate the effectiveness of the service they provide. Applicants should use validated indicators for quality improvement or quality standards, and other reference data sources in England, or the Health and Care Standards for Wales, or the Health and Care Standards for Northern Ireland, or the Health and Care Standards for Scotland.

Applicants should also describe how they have demonstrated a commitment to caring for patients with compassion, integrity and dignity, and how they have demonstrated a commitment to providing a high-quality service to our patients and the public.

college or university success in teaching audits
i.e. personal commitment to developing teaching skills
unexpected or non-mainstream contributions

the examples can be found in the applicants' guide for

Relevant setting

This section is intended to look at innovation and its impact in any relevant setting. This section is intended to look at innovation and its impact in any relevant setting and may include evidence relating to activities and their impact not traditionally considered as research. It can include evidence of innovation that has been developed and implemented, improved ways of working and process efficiencies that have been adopted widely, demonstrably making more cost-effective use of NHS resources. It can also include evidence of innovation that has been developed in partnership with external partners that have demonstrated a benefit to the wider NHS or that support the GMC's objectives of promoting research for doctors.

Applicants must be clear that their innovation is above any research, academic or professional activity. It should be clearly defined, and where appropriate, the results of any evaluation or audit should be included in the evidence base. The innovation should be clearly defined and the evidence base for measuring how quality has improved.

On a separate line, applicants should explain what they have achieved in the last 5 years and how their innovation has been implemented. Applicants should also give supporting evidence of outcomes. They should

public and the clinical relevance and impact of any publications cited.

Domain 5: additional national impact

This domain gives applicants an opportunity to provide evidence of wider beneficial impacts over the last 5 years that have not been captured elsewhere on their form, in domains 1 to 4. They can also demonstrate the wider effect their work has had in areas

endeavour to demonstrate impact 'over and above' the expectations of outcomes for which the firm is paid. There is added value if appropriate metrics can be included and, as usual, accurate dating is critical.

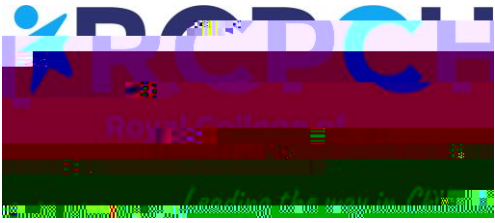

This domain can include work for charitable organisations and work with a more diverse range of stakeholders for example, by overseas, in research, education or informing national government or development in low income countries, or prevention. Expanding on a number of activities that are nationally recognised

3 can score well. This is particularly true if it is clear how the impact of the work has been re-ferred that is highlighted in national or regional media or other channels

regionally or nationally. However, applicants must not merely repeat or list activities that have been described elsewhere

any points. This domain could also describe work on how applicants have addressed health and well-being in providing care delivered into the professional home building and partnership of working.

Particularly important areas are NHS priority disease areas or other areas where it is particularly important to build on existing health care or to make a significant contribution. Innovative work with health and social care providers outside the NHS may also be cited in this domain, but clear evidence of positive impact must be provided.

The standard guidelines contain information on the criteria for applications and domains and examples of evidence that applicants could provide. We would expect evidence to be provided from within your organisation in line with ACCIA expectations.
